

# ACCESS Launchpad Hosting Service

Enjoy no upfront setup  
cost and start generating  
RMR immediately

Host your WebBRIX-based application  
with AMT's partner hosting service.

The product is presented to end users with your OEM product name, logo and customizations and easily accessed from anywhere with a web browser. For your customers, this SaaS (Software-as-a-Service) model removes the two largest barriers: it eliminates software installation and hardware configuration.

Offer your re-branded access control service as "managed" or allow your customers to self-manage.

# Everything you need for SaaS Access Control

## SOFTWARE

This solution is ideal for highly distributed security systems running as a service (SaaS). The software is preinstalled and hosted in a certified data center and easily accessed from anywhere with a web browser. No dedicated computer is needed at either the OEM or end user site. Software maintenance and updates are provided by AMT's professional team.

## HARDWARE

Off-the-shelf products from major manufacturers such as HID are replacing proprietary hardware systems. This lets you select the best of breed of hardware and software, eliminating lock-in to a single vendor. AMT's Web-hosting Service reduces the IT time customers spend managing their system and removes the expense of owning and maintaining servers.

## HOSTING SERVICE

Your customers can have confidence knowing that their application is running in a data center that is SAS 70 Type II, PCI DSS and Safe Harbor certified. The data center's infrastructure includes Raid 10 storage arrays with automatic backups providing secure, cost effective data storage compared to owning a similar system. SaaS also saves installers the time traditionally spent installing software on customer computers.

## Whose logo do my customers see?

Yours. The reference application is created to be re-branded and therefore we require your brand on the product. We've made it easy for you to upload your logo and browse color themes for your application.

## Why do end users want hosted access?

### EASY TO TRY

With the hosting service, they can try a one-two door system with no risk and grow as needed.

### TECHNICAL SUPPORT

They receive immediate phone support for technical questions or can navigate through How-to's, FAQs, and searchable online documentation at AMT Developer Network.

### MANAGED ACCESS

Manage end users' day-to-day access control activities so they don't have to! Receive additional RMR from your customers by offering managed services.

### NO RISK OF INSTALLATION PROBLEMS

They simply joining an existing system.

### COSTS LESS

The SaaS model eliminates the need for costly investment of owning servers, not to mention their maintenance and replacement. End users save on IT costs with one less system to maintain.

### DATABASE BACKUPS,

Windows patches and free software upgrades are included with the service.
