

WebBrix Training Offerings

WebBrix Installation and Troubleshooting

Course # 4000-2000 TRAINING

This course will give you the confidence to evaluate, install and troubleshoot your WebBrix based application. A good understanding of the computer and network environments is crucial when installing software. You'll learn the correct information to gather prior to install. A detailed, step by step walk through of the installation will allow you to see all the different scenarios and how to make the correct choices to ensure success. The graduates of this course will also be equipped to evaluate and troubleshoot the software by using log files, reports and performance counters.

1/2 day, \$500.00 US*

- *Pre-Installation Requirements:* Covers the hardware, software, OS and network requirements that will ensure a successful WebBrix installation.
- *WebBrix installation:* Covers the application installation and error reporting during the install. A hands on step by step walk through of a WebBrix installation will familiarize the attendee with the installation process. This will cover setting up the servers, and clients.
- *File locations:* Covers the actual file locations where the data is stored.
- *Installation Information:* Covers all the installation information as it relates to the server, paths, files and versions installed.
- *WebBrix log files:* Covers the data stored in the error logs, install logs and the database logs. Also, how they pertain to the system and how to use the error logs to identify any problems.
- *Diagnostic Reports:* Covers the default diagnostic reports provided by WebBrix. These reports will aid in detailing the health and status of the system. The reports detail ID holders, information status to the controllers, orphaned data and unique ID per controller.
- *VertX Counters:* Covers the Windows counters that count the command queue, message queue and the number of VertX connections.
- *Uninstall:* Covers the WebBrix uninstall process. The attendee will go through an actual uninstall process and verify that all the files installed for WebBrix were successfully uninstalled.

* Price includes up to three participants. Each additional person is \$150.00 US.

WebBrix Training Offerings

WebBrix Basic

Course# 4000-2100 TRAINING

This course covers the concepts, terminology and best practices using a WebBrix based access control system. The graduates of this course will be familiar with all the aspects of the day to day operations of this system. Included will be in depth, hands on instruction of adding and deleting cards and cardholders, setting up time schedules and holidays, running reports and handling alarms.

- Overview of a WebBrix-based application (finding the Windows menu shortcuts, application menu items)
- Hardware discovery/definition
- Device status/commanding
- Device configuration
- Holidays, Schedules, Door Groups, Access Levels, People
- Basic reports, Events, Alarms, Alarm definitions, User instructions, Email alarm actions
- Roles, Users, Security, & System Settings
- Partitioning – Creating partitions, sharing between partitions
- Database backup/restore/archive

2 days, \$2,500.00 US*

* Price includes up to three participants. Each additional person is \$750.00 US.

WebBrix Advanced

Course# 4000-2200 TRAINING

This course covers the advanced configuration of your WebBrix based application.

- Event and alarm binding
- Profiles
- Registry settings
- VBA IDE, Forms, Drag & drop from the tree, loading VBA projects from menubar item clicks
