

## AMT, Inc. Announces Card Access Software-as-a-Service for Re-branding

**Saint Paul, MN March 24, 2010-** AMT, Inc., a total security solutions provider, announces a third-party hosting service as the final offering of a three prong approach to support AMT's partners in the Security-as-a-Service (SaaS) business. This completes AMT's offering of product, hosting service, and technical services.

AMT's three offerings are designed to work together. WebBRIX, a reference application, provides partners everything they need to brand their own OEM access control product. The addition of Access Launchpad, AMT's partner hosting service, provides an already installed application and infrastructure for partners in a SAS 70 Type II, PCI DSS and Safe Harbor certified data center. The service component includes: system support, developer support, sales and technical training, and software engineering services to complete this turnkey solution. AMT's goal is to provide a complete set of offerings so its partners can complement their own staff and resources with AMT's, outsourcing as much or as little as they desire.

The Access Launchpad service eliminates the two traditional barriers faced by access control installers and the OEMs that support them: software installation and hardware configuration. This service also removes upfront setup costs and lets partners quickly generate RMR through a hosted or managed access control service. End users see cost reductions by having live phone support included in the service, not having to purchase and maintain their own servers, and free, seamless software upgrades.

AMT will be hosting its partners' applications on Access Launchpad, live at ISC West. Visit AMT in HID Global's Booth #12051 at ISC West from March 24<sup>th</sup>-26<sup>th</sup> 2010 in Las Vegas, NV.

### **About AMT, Inc.**

AMT is a total security solutions provider of software applications, off-the-shelf hardware, hosting and managed services and complete system support. AMT has specialized experience creating software for highly distributed security systems running as a service (SaaS). AMT further empowers OEM partners by providing source code, training and developer resources to customize their applications. AMT is an Advantage HID Channel Partner.
