

AMT launches 24/7 online support with AMT Developer Network

Customers can now solve support issues on their own with up-to-date documentation at the AMTDN website

Saint Paul, MN September 21, 2009 - AMT announces the launch of AMT Developer Network, a site designed to aid AMT customers in the installation, configuration and troubleshooting of WebBrix based applications.

AMTDN is a searchable knowledge base open to the public. It includes tutorials, how-to guides, and FAQ's regarding WebBrix based applications along with information on HID's Edge™ and Vertx™ controllers.

“The goal of AMTDN is to expose as much information as possible in a logical, easy to access format.” said Rick Flood, Head of Technical Services for AMT.

The online documentation will continue to grow as AMT updates software and adopts new hardware devices. The site can be accessed at <http://support.amt-us.com/amtdn>.

About AMT, Inc.

AMT is a total security solutions provider that offers ready to use software, proven hardware, and complete system support. AMT has specialized experience in creating software for highly distributed security systems running as a service (SaaS) in customer owned data centers as well as central station monitoring environments. AMT further empowers their customers by providing source code, training and developer resources to customize their applications. More information is available at www.amt-us.com.
